LeSabre

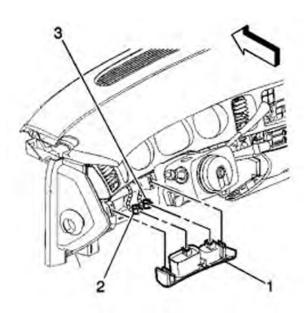

- 1. Remove the defroster grille by carefully prying upward in order to release the retainers
- 2. Disconnect the electrical connector from the sensor (1).
- 3. Twist the sensor counterclockwise to remove.

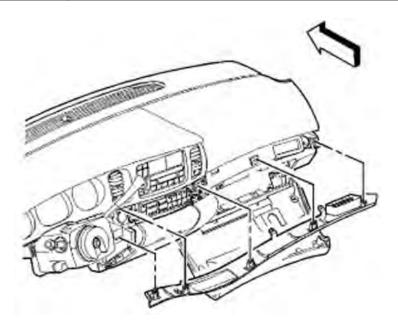

- 4. Pull the windshield pillar garnish molding away from the windshield pillar in order to disengage the retainer clips
- 5. Remove the windshield pillar garnish molding. Do this for both sides of vehicle.

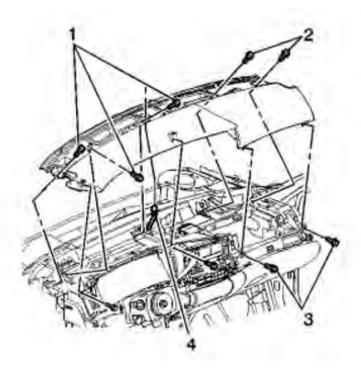

- 6. Open the instrument panel storage compartment door.
- 7. Grip the outer trim panel at the lower edge and pull outward until the retainers disengage. Also remove the left side outer trim panel in similar fashion.

- 8. Remove the left trim plate by pulling the trim plate (1) toward the rear of vehicle.
- 9. Disconnect the headlamp and HUD switch connectors (2,3).

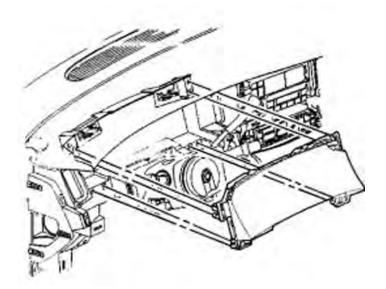

- 10. Open the storage compartment and remove the two fasteners that secure the right trim plate to the instrument panel.
- 11. Remove the right trim panel by pulling toward the rear of vehicle.

- 12. Remove the fasteners (1,2,3) that secure the upper trim pad to the carrier.
- 13. Lift the pad upward in order to disengage the retainers from the instrument panel.
- 14. Disconnect the sunload sensor (4).

- 15. Raise the tilt steering column to the highest position and remove the 2 fasteners (1).
- 16. Lower the column.
- 17. Disengage the 4 clips across the top edge, and the 4 clips across the bottom edge that retain the cluster trim plate to the instrument panel by gently pulling toward the rear of vehicle.
- 18. Set the parking brake and move the gear selector to the L1 position.
- 19. Tilt the top of the bezel rearward in order to remove.
- 20. Disconnect the electrical connector (3) from the driver information center switch (5).

[GM INSTRUMENT CLUSTER REMOVAL GUIDE]
